Driving Change
Raising Standards
Improving Perceptions

Mineral Products Association
Charter and Members’ Handbook 2023
Background

Since its formation in 2009, MPA has grown significantly and its membership represents the vast majority of UK mineral products operating companies across its 16 Product Groups.

The Association is established and recognised as the sectoral organisation for the mineral products industry. Having one integrated association, where policy development from the ‘bottom up’ is discussed in the Regions and relevant expert committees before being signed off at Council and Board level, ensures that the sector has effective governance. MPA is able to share best practices across all products efficiently to influence operator behaviour and in turn external perceptions amongst key stakeholders.

We want membership of MPA to be ‘valued and mean something’.

The MPA Charter will help clarify, simplify and consolidate expectations that the members have for themselves and have a positive impact on the way the industry operates.

5 key aims underpin the work of the MPA, creating the high level agenda it uses to influence Government and other key stakeholders.

We seek:

1. Economic conditions that support investment
2. Better Government support for an essential industry
3. A reasonable licence to operate
4. Proportionate legislation and regulation
5. Recognition of progress
Introduction
Who we are

MPA is the industry trade association for the aggregates, asphalt, cement, concrete, dimension stone, lime, mortar and silica sand industries.

The operational structure of MPA is set out below:
Governance of the MPA

Role of the Board
The Board is the governing body for MPA Ltd (the MPA) responsible for the ‘Business of the Association’ on behalf of the members. This includes both Core business and that of the Product Groups. Responsibilities include strategic issues, finance, the annual budget & business plan, all policies, the appointment and monitoring of the performance of the CEO and to put forward a candidate for Chair every 2 years to the membership to ratify.

Role of Directors
Directors should participate in the best interests of the industry, trade association and members of the association and try to avoid thinking purely in terms of what is best for their company.

Role of Chair
The role of the Chair is non-executive and they are responsible to the Board whilst also leading and managing it.

Role of Chief Executive
The CEO is responsible for managing the association with MPA staff and reports to the Board. The CEO works closely with the Chair on governance issues, and keeps the Board advised and well prepared and able to fulfil their responsibilities. The CEO also has responsibility for identifying any governance shortfalls and draws these to the attention of the Board.

Role of Council
The Council is responsible for all matters relating to membership and for advising the Board on strategic and other key policy issues taking into account the views of the wider membership.

Role of Core Committees and Product Groups
The committees are responsible for dealing with issues of relevance that have implications for members’ interests. Membership of committees can include both Producer and Associate members.
MPA Core Committees

The committees are responsible for dealing with issues of relevance that have implications for members’ interests. Membership of committees can include Producer, Associate and Affiliate members. Where possible a mixed and balanced committee representing companies large, medium and small is recommended. Chairs of Core Committees have a seat on MPA Council.

The committees are as follows:

Health & Safety Committee
Sustainable Development Group
Policy Advisory Group
Economic Affairs Committee
Environment & Mineral Planning Committee (E&MP)
Standards Forum
English Regions (North, South West, London & South East, East Anglia, Midlands)
MPA Wales
One of MPA’s strengths lies in its Regional structure in England and Wales, which is based on the UK economic planning regions. Regional Chairs feed local views and recommendations to MPA Council. The Regions also provide many opportunities for members of all sizes to network with their peers. Chairs of Regional Committees have a seat on MPA Council.

MPA Scotland and MPA Northern Ireland are affiliate members, and work closely with the MPA through participation in key committees and MPA Council.
MPA Product Groups

MPA includes a number of constituent organisations (Product Groups) that represent the interests of specific mineral products. Operating together under the MPA umbrella provides combined strength while facilitating cost-effective use of resources and expertise. Chairs of Product Group Committees have a seat on MPA Council.

It is a membership requirement that companies must include all in-scope products within their MPA membership.

**Cementitious Product Groups**
- **MPA Cement**
- **BRMCA** (British Ready-Mixed Concrete Association)
- **MPA Mortar**
- **MPA Precast**
- **MPA Masonry**
- **MPA The Concrete Centre**
- **CSMA** (Cementitious Slag Makers Association)

**Non-Cementitious Product Groups**
- **MPA Aggregates**
- **MPA Asphalt**
- **MPA Dimension Stone**
- **MPA Slag**
- **ALA** (Agricultural Lime Association)
- **BLA** (British Lime Association)
- **BMAPA** (British Marine Aggregate Producers Association)
- **SAMSA** (Silica and Moulding Sands Association)

*Affiliate members*
What we do

MPA represents the interests of MPA members and the industry with all levels of Government, regulators, other organisations and external audiences. We are committed to Driving Change, Raising Standards and Improving Perceptions of the industry.

Key activities include:

- Improving health & safety
- Representing and promoting the sector among public and political stakeholders
- Raising awareness of the sector and its contribution to the economy
- Gathering and presenting evidence and information
- Influencing policy, regulation and legislation in the UK and EU
- Protecting the industry’s licence to operate
- Safeguarding and developing markets
- Improving perceptions
- Informing on markets and economic contribution
- Influencing technical and design standards
- Influencing supply chains
- Encouraging innovation
- Promoting the use of mineral products
- Educating stakeholders to ‘Make the Link’ between mineral products and their use
Our Core Values

MPA Members are:

✓ Committed to raising competence and skill levels in the industry
✓ Committed to the principles of sustainable development
✓ Committed to realising Vision Zero - Everyone Home Safe and Well Every Day
✓ Committed to protecting and enhancing UK Biodiversity
✓ Committed to the high quality restoration of land to valuable after uses
✓ Committed to reducing carbon and other industrial emissions
✓ Socially and environmentally responsible suppliers of essential materials
✓ Committed to the sustainable use of their products by end users
✓ Committed to maximising recycling of materials, improving resource efficiency and contributing to the ‘circular economy’
✓ Valuable and active members of their communities, particularly in rural areas
✓ Able to provide a range of career opportunities and career development and respond to skills shortages
✓ Innovative and share good and best practice particularly in health and safety and sustainable development
Membership of MPA & MPA Charter

There are 3 types of membership of the MPA:

**Producer Members**
are those companies who extract minerals, process, manufacture, distribute, and sell mineral products, including aggregates, asphalt, cement, concrete, dimension stone, lime, mortar and silica sand.

**Associate Members**
are typically consultants, lawyers, specialist suppliers, plant and equipment manufacturers or contractors.

**Affiliates**
are representative organisations, normally trade associations with a common interest.

The Charter does not apply to Associate Members or Affiliates, unless they choose for it to do so.

Membership of the MPA means that companies agree to operate in accordance with the Memorandum & Articles of Association and the MPA Charter, which includes the Vision, Strategic Priorities and Objectives, Policies and Data Collection, Information and Commitments, and also to respect the Core Values.

The MPA Charter is the vehicle that will enable the Vision for 2025 and the Strategic Priorities to be achieved by; **Driving Change, Raising Standards and Improving Perceptions.**

1 Members should note in particular clause 19.1 regarding the resignation of membership or associate membership from the Association: “If he shall resign his Membership by serving not less than twelve months’ notice in writing under his hand left at the Office, such notice not to take effect until 31st December in the year after the notice is served;” and clause 19.4 regarding the termination of membership relating to the requirements specified by the core values: “…if in the opinion of the General Council his conduct shall be calculated in any respect to be prejudicial to the interest of the Association or of its Members collectively or of the Council within one month after such notice in writing requiring him to do so shall have been served upon him by the Association and as a result of such failure the General Council shall determine that such Membership or Associateship be terminated; in the case of failure to meet the requirements specified by the core values of the Association the judgement will be made by a panel of three Members, two of whom must be members of General Council, and will be endorsed by General Council.”
The MPA Vision for 2025

Member consultation has established that the industry wishes:

‘to be valued as an essential and economically, socially and environmentally sustainable industry of significance to the economy and our way of life’

and perceived as:

- cohesive and well-organised, responsible and accountable
- creative, collaborative and outward looking
- professional and competent, setting high standards to retain and attract new people, reflecting UK diversity
- innovative, embracing the use of best available technology and sharing best practices
- engaging constructively and strategically with Government, regulators, local communities and other stakeholders
MPA Strategic Priorities and Objectives

The following 7 Strategic Priorities will underpin the achievement of the Vision for 2025.

- People
- Resource Use
- Climate Change & Energy
- Natural Environment
- Built Environment
- Communicating Industry Value

Driving Change • Raising Standards • Improving Perceptions
# MPA Strategic Priorities and Objectives

The broad objectives of the 7 Strategic Priorities are as indicated below. Delivery of the objectives and targets, where applicable, is managed through MPA’s Committees and Working Groups.

<table>
<thead>
<tr>
<th>Strategic Priority</th>
<th>Objective</th>
</tr>
</thead>
</table>
| Health & Safety | • **Employee and Contractor Health & Safety:** treat the health, safety and well-being of employees, contractors and visitors as the number one priority in order to realise Vision Zero  
• **Public Safety:** protect the general public around active operations, on disused sites and in the transportation and use of our products |
| People | • **Employment:** improve the profile and perception of the sector to attract employees and offer rewarding career opportunities  
• **Skills and Competence:** ensure all employees and contractors have the necessary and relevant skills and competences  
• **Equality and Diversity:** encourage opportunities in the industry for all, attracting and retaining the best talent  
• **Local Communities:** engage fully with local communities and strive to be good neighbours |
| Resource Use | • **Access to Sufficient Minerals & Resources:** plan, consult and engage with communities, planning authorities and regulators when seeking new permissions to ensure steady and adequate supply  
• **Circular Economy and Resource Efficiency:** make the most efficient use of all resources, embracing the principles of the Circular Economy  
• **Water:** optimise the use of water and ensure prudent management  
• **Waste:** minimise waste and maximise re-use and recycling |
## MPA Strategic Priorities and Objectives

<table>
<thead>
<tr>
<th>Strategic Priority</th>
<th>Objective</th>
</tr>
</thead>
</table>
| Climate Change & Energy | - **Carbon & Atmospheric Emissions**: reduce emissions in accordance with the MPA carbon road maps and Government objectives  
- **Energy**: optimise the use of energy whilst maximising the use of non fossil fuels  
- **Transport**: reduce emissions and other impacts of the transportation and delivery of products  
- **Adaptation**: develop products and solutions to reduce the impacts of climate change |
| Natural Environment | - **Biodiversity**: protect and enhance biodiversity and deliver net gain wherever possible  
- **Land Restoration**: restore land to high quality and undertake good aftercare  
- **Natural Capital**: protect natural capital and enhance where possible  
- **Geodiversity**: protect geodiversity and enhance where possible  
- **Heritage**: protect national and local heritage assets appropriately  
- **Environmental Protection**: minimise and mitigate operational impacts |
| Built Environment | - **Technical Codes and Standards**: influence the maintenance and development of International, European and UK technical codes and standards  
- **Sustainable Products**: promote the development and use of sustainable and responsibly-sourced mineral products  
- **Sustainable Construction**: influence the design and procurement of the built environment with high quality and sustainable solutions |
| Communicating Industry Value | - **Contribution to Economy and Supply Chain**: quantify the industry’s contribution to local and national economies  
- **Influencing the Business Environment**: work with Government and others to encourage investment and sustainable growth  
- **Stakeholder Engagement**: engage with stakeholders in a transparent and informative way  
- **Making the Link**: enable stakeholders to ‘Make the Link’ between the activities of the mineral products industry and its contribution |
Data Collection, Information and Commitments

The commitments indicated below are derived from the existing mandatory and voluntary membership commitments. Members must comply with all CMA requirements and MPA Undertakings in relation to data collection.

- **Mandatory**
- **Voluntary**

**General**
- To submit accurate annual tonnage returns for subscription calculation (MPA Cement members to refer to specific reporting process for cement).
- To pay subscriptions in a timely fashion.
- To provide MPA market information data in response to MPA surveys as appropriate.
- To follow MPA’s procedures for Competition Law compliance in all MPA business.

**Health & Safety**
- To submit H&S data to support the collation of the ‘Hard Targets’ and ‘Leading Indicators’ reporting.
- To support the achievement of the competence milestones in ‘Safer by Competence’ and submit accurate data.
- To support the MPA Driver Training Initiative that all drivers delivering on behalf of members hold or are in the process of obtaining an MP Connect Drivers’ Card or equivalent.
- To submit data relating to Respirable Crystalline Silica as part of our commitment to the NEPSI Social Dialogue Agreement.
- To provide entries for the MPA Health & Safety Awards.
- To support the ‘Stay Safe’ public safety campaign and submit data on incidents.

**People**
- To evaluate the need for a Community Engagement Plan for extractive sites and where appropriate at other sites as part of the MPA Good Neighbour Scheme.
- To submit data on the number of valid complaints made by members of the public.
- To submit data on employee diversity.
Resource Use

- To submit data on mains and licensed abstracted water.
- To submit data relating to planning application performance as part of the MPA Annual Mineral Planning Survey (AMPS).
- To submit data on recycled, transferred and discharged water.
- To have sites metered for water use in accordance with the World Business Council for Sustainable Development Protocol for Water Reporting.
- To operate sites in accordance with the Waste Hierarchy and submit data on waste produced on site sent to landfill.
- To submit data on the amount of Extractive Waste produced on site.
- To submit data on the amount of waste used for restoration purposes in accordance with the site Planning Permission.

Climate Change and Energy

- To submit data on operational energy use to enable MPA to calculate sectoral carbon emissions (MPA Cement and BLA members to refer to specific reporting requirements).
- To submit data on fuel use for transport where available.

Natural Environment

- To assess and implement, where appropriate, a Biodiversity Action Plan for extractive sites.
- To report on operation of an ISO14001 and any other environmental management scheme (if applicable).
- To submit data on the total area of SSSIs owned or managed.
- To submit data on the total Priority Habitat created.
- To submit data on the total land surveyed for archaeological investigation prior to extraction.
- To provide entries for the Restoration and Biodiversity Awards.
- To provide sites for inclusion in the MPA National Nature Park.

Built Environment

- To report on the operation of any relevant quality management systems (if applicable).
- To report on the operation of a responsible sourcing scheme and indicate what level (if applicable).
# MPA Survey Data Requests from Producer Members

This is a schedule of core data requirements from members on a quarterly and annual basis to fulfill the data collection information and commitments. We hope that this will help members to plan for surveys.

**NOTES**

1. Sales volume data is collected quarterly from a sample of members. Cement data is collected quarterly by a Permitted Third Party and published 6 months in arrears. Data is collated and sent to all members, and a press release issued. Data is also used to update the MPA’s Profile of the Mineral Products Industry document, and is also used for forecast purposes.

2. Health & Safety data is collected in 3 parts: H&S quarterly statistics (quarterly); Competence Survey (annual or every 6 months, depending on the size of the company); and the NEPSI Survey (every 2 years). Data is not published.

3. Tonnage Subscriptions data is collected once annually from all Producer members. Data is not published, but is used to calculate membership subscriptions.

4. Sustainable Development data is collected once annually from all Producer members. Data is collated and published annually in the MPA Sustainable Development Report.

5. AMPS data is collected once annually from all Producer members who extract relevant materials. Results are collated and published annually in the Annual Mineral Planning Survey (AMPS).
MPA Member Policies

The current policies which all Producer Members are expected to observe are summarised below:

• **Vision Zero** – values and strategy including ‘The Fatal 6’
• **Safer by Competence**
• **Vulnerable Road User Safety and Driver Training**
• **Sheeting of Delivery Vehicles**
• **Fitting of Inclinometers to Articulated Tippers**
• **Contractor Safety**
**Vision Zero**

**MPA and its members have committed to Vision Zero – to ensure that everyone goes home – Safe & Well Every Day**

Vision Zero is built around eliminating the causes of *The Fatal 6*. These are the high consequence hazards that analysis has shown are responsible for the majority of the fatalities, serious injuries and long term ill health in the industry. The strategy is to focus on these hazards in the work environment and, through a wide range of measures, achieve zero serious incidents or fatalities associated with *The Fatal 6* by 2025.

This will only be possible if everyone within the industry understands and commits to this vision. Everyone has a role to play to ensure that they are doing their best to ensure they are keeping both themselves and their colleagues safe.

The Vision incorporates **6 values** relating to Health and Safety. Collectively we will need to embrace these to help bring about changes in our behaviour. These values are already established within the culture of some member organisations and organisations working within the Mineral Products industry.

The MPA has developed **6 strategies** to support its members in achieving Vision Zero. It will monitor the industry’s performance by reviewing both leading and lagging indicators;

- Lagging indicators look back at what has already happened such as the number of fatalities or serious incidents that have occurred.
- Forward looking indicators help to measure activities that should improve health and safety performance in the future.
6 values to keep everyone safe

1. **Empowerment**
   Every worker has the right to stop any job if concerned it may be unsafe or unhealthy to continue.

2. **Engaged Visible and Consistent Leadership**
   Committed to achieving the vision of Zero Harm.

3. **Zero Tolerance of Unsafe Working Conditions**
   That pose a significant risk of injury or to health.

4. **High Quality Implementation**
   Developing; clear health and safety principles, clarity of expectations, clear simple smart initiatives, no ‘box ticking’.

5. **Collaboration and Sharing**
   Building effective relationships & sharing knowledge and good practices.

6. **Compliance**
   As a minimum with legal/regulatory requirements and MPA policies and aspiring to world class.
6 strategies for MPA and its members to follow

1. An unrelenting approach to eliminating the things that can kill or seriously harm people through adoption of industry safety principles and good practices focused on ‘The Fatal 6’.

2. Developing competent and committed leaders at all levels.

3. Promoting recognition as a means to support a positive culture within the workforce.

4. Creating forward looking measurement systems which balance the measurement of ‘the presence of safety’ with the ‘absence of incidents’.

5. Helping members to create workplaces where health and well-being is protected and promoted.

6. Actively promoting and facilitating engagement from all member organisations.
# 3 Hard Targets to help measure our success

<table>
<thead>
<tr>
<th>Hard Target 1</th>
<th>Zero Reportable Incidents (fatalities or serious injuries) relating to <em>The Fatal 6</em> by 2025.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hard Target 2</td>
<td>A 50% reduction in Lost Time Injury Frequency Rate (LTIFR) to 1.5 by 2025.</td>
</tr>
<tr>
<td>Hard Target 3</td>
<td>Zero incidences of uncontrolled personal exposures to RCS above the Workplace Exposure Limit (WEL) where the hierarchy of control has not been applied.</td>
</tr>
</tbody>
</table>

## Leading Indicators – activities that help improve health and safety at work

**Achieving more of the following:**

- Auditing of isolation
- Driver and contractor competency/skills cards
- Participation in H&S Leadership workshops
- [H&S Good Practice awards](#) submissions
- Sharing of High Potential incidents
- Occupational health screening
- Routine monitoring of silica exposures
- Using [MPA Safer by Association Self Audit Tool](#)
- Engagement in MPA H&S events
- Engagement in MPA Safety Days
- Engagement with MPA’s ‘Safer by Sharing’
- Engagement with MPA’s ‘Exchanging Places’

*Driving Change ● Raising Standards ● Improving Perceptions*
‘The Fatal 6’

Analysis has identified 6 high consequence hazards in the Mineral Products industry that account for 94% of all fatalities.

MPA has set up a working group for each theme. They are tasked to help share good practices, raise awareness about risks and incidents, and to develop recommendations and resources to help the industry to eliminate the causes of ‘The Fatal 6’

Information about the ‘The Fatal 6’ and the resources available to help mitigate them are all accessible on ‘The Fatal 6’ section of Safequarry.

www.safequarry.com

Register now for Safequarry alerts   Download the Safequarry app
Safer by Competence

In order to realise Vision Zero, the MPA has devised a framework to deliver demonstrable personal competence across the industry. This comprises a series of initiatives and targets encompassing employees and contractors across all products and services within the MPA’s membership.

The framework sets out routes to meeting National Occupational Standards relevant to job functions, with a range of targets applicable to all in operational employment. For the great majority of MPA members, NVQ/QCF/SCQF vocational qualifications routes provide the logical solutions and these represent the preferred approach. To help individuals, employers and advisers, the Mineral Products Qualifications Council has produced an updated Competence Map. Please see the MPQC website (www.mpawards.co.uk) for more information.

’Safer by Competence’ is supported by a family of complementary ‘Safer by…’ Initiatives (see overleaf).
Vision Zero, Safer by Competence and 'The Fatal 6'

**Safer and Healthier by Leadership** – Initiative highlighting the role of leadership in improving health and safety performance.

**Safer by Design** – Voluntary guidance addressing the design vacuum that exists between many manufacturers and users of mobile plant.

**Safer by Sharing** – MPA Seminars giving H&S guidance to members by sharing good practice; peer-to-peer assistance facilitated by MPA.

**Safer by Partnership** – Package of measures focused on contractor safety.

**Safer by Association** – Site H&S evaluation and improvement too.

Health considerations are an embedded part of all aspects of the Safer by Competence framework.
Vulnerable Road User Safety and Driver Training

**MPA’s Vulnerable Road User Safety Policy** applies to all vehicles delivering on behalf of members which are over 3.5 tonnes GVW and focuses on driver training and vehicle safety equipment.

**Driver Training**
- All drivers delivering on behalf of members must hold MPQC [MP Connect](#)/Drivers Skills Cards or equivalents (e.g. company courses approved by MPQC) with renewal within 5 years
- All drivers delivering on behalf of members are required to undertake VRU safety training, based on MPQC CPC-approved course or equivalent.
- VRU safety training should be progressive, with a view to expanding training to include cycle hazard awareness.

**MP Connect**
The safety and competence of contractors, including drivers, has long been a priority of the MPA members, as reflected in the MPA Charter. MPA strongly recommends that all contractors obtain and retain valid Mineral Products Qualifications Council/SPA contractor passports and that members request sight of these passports as part of site induction. Specifically, it is a requirement that all drivers delivering on behalf of members must hold an [MP Connect](#) Drivers’ Card or equivalent.

MP Connect is a new state of the art card system that enables drivers to carry a fully functioning record of their working achievements and other important information and data in the form of wallet sized card. Supported by the MPA Board and Council, it represents a significant step forward in managing the safety of contract drivers, and is strongly recommended to members.

**Vehicle Safety Equipment**
All in scope delivery vehicles must be fully in accordance with current legislation and Construction and Use regulations and be fitted with additional safety equipment.
Vulnerable Road User Safety and Driver Training

**Additional or Specified Equipment Requirements**

MPA members are required to equip new vehicles to the standard set out below. Drivers using vehicles in environments with significant numbers of vulnerable road users should consider accelerating the fitting of recommended equipment.

Vulnerable Road User Safety and Driver Training

Management of Haulage Operations
Transport fleet operators are required to ensure that the management of transport operations meets the standard of an approved independent fleet management audit, for example the Fleet Operator Recognition Scheme (FORS).

Collision Reporting
Fleet operators are required to collect, investigate and analyse information collected in relation to collisions involving their vehicles which result in injury or damage to vehicles and property.

Traffic Routing
Members should ensure that delivery routes specified by clients/customers are adhered to unless directed otherwise.

Construction Client Requirements
When acting as construction clients/contractors, MPA members should implement standards to improve general safety associated with materials delivery and unloading. These include planning of deliveries, good site access and egress and safe, flat areas for loading and unloading.
Sheeting of Delivery Vehicles

• All member-owned tipping vehicles and those tipping vehicles working for members shall be sheeted when leaving members’ premises, when they are carrying any aggregates with a grading less than 150mm.

• It is the responsibility of individual members to ensure that all such vehicles are sheeted and unsheeted in accordance with a safe system of work.

• All member-owned tipping vehicles and tipping vehicles in members’ livery over 10 tonnes GVW whether covered by a formal contractual arrangement or not should be fitted with ground operated sheeting system.

• MPA members will actively pursue a policy of encouraging all hauliers to fit appropriate vehicles with ground or cab operated sheeting systems.

• For vehicles less than 10 tonnes GVW, and those vehicles fitted with grabs and other ancillary equipment, members should ensure that safe practice is used in the sheeting of these vehicles.
The Fitting of Inclinometers to Articulated Tippers

The fitting of inclinometers, interfaced with the power take-off (PTO) to both sound an alarm and stop the ram being raised, is a required safety feature fitted to new vehicles and a recommended retrofit for existing vehicles.

Introduction
Roll overs of articulated tippers remains a significant safety hazard and evidence from members indicates a continuing problem both on customer and member sites. There is also a perception amongst some contractors and clients that articulated tippers are inherently unsafe, leading to these vehicles being banned from some contracts.

While some members are managing this safety hazard through the use of non-tipping technology such as walking floor trailers, articulated tippers are used widely throughout the industry and will continue to be used for the foreseeable future. Therefore a policy to improve the safety of articulated tippers should have multiple benefits:

1. It will improve driver and workplace safety on member and customer sites
2. It will help to encourage contractors and clients to accept deliveries from (safer) articulated tippers.
3. Greater use of (safer) articulated tippers would reduce carbon and other emissions associated with industry supply (per tonne of aggregates) and reduce the number of HGV deliveries and therefore congestion

Specific Recommendation
MPA mandates the fitting of Power Take Off (PTO) engaged inclinometer systems to all new tractor and trailer tipping combinations coming into service and recommends retrofitting existing articulated tipping combinations by the end of 2024.
The Fitting of Inclinometers to Articulated Tippers

Inclinometer Technology
Most vehicles are already purchased with an onboard weigher system with an inclinometer installed and the additional cost of installing the PTO interface on new vehicles is relatively low.

An inclinometer system detects the deflection at the load as it is raised and can step in if it goes beyond the set point, allowing the load to be lowered before the point of roll over. Rushed tipping appears to play a significant part in roll overs and a system that prevents the tip starting until the vehicle is on suitable level ground, or steps in if the load is causing instability whilst it is being raised during discharge is the best solution, as drivers can choose to ignore a system which is simply an alarm. These systems should be set to 4 degrees at the point of activation and supporting information for installation and training can be distributed to operators, including details of the systems and suppliers.

Supporting Evidence and information
The MPA survey in 2014 showed 37 artic roll overs amongst members over a 3-year period and as this survey information was not comprehensive it is therefore probable that the number of roll overs is significantly higher. Anecdotal evidence from members indicates that articulated tipper roll overs continue to occur. Safe tipping angles are extremely difficult for drivers to judge without the use of inclinometer technology. Small and often undetectable variations in ground levels and non-horizontal horizons on sites make it very difficult for drivers to gauge whether tipping angles are safe.
The Fitting of Inclinometers to Articulated Tippers

Whilst there has been an increase in the number of walking floor trailers being built, these still only represent a very small percentage of the artic bulk haulage market, with the majority of the independent hauliers’ fleets purchasing 60 – 70 cu m bulker tipping trailers – believed to account for circa 80% of the articulated tipper market. Industry relies upon these hauliers for volume flexibility and cost-effective trucked haulage. Only dedicated industry hauliers or branded fleets tend to buy 38 cu m aggregate trailers or walking floors.

Bulker bodies represented over 80% of recorded roll overs as they have the added risk of poorly distributed loads further reducing stability (70% of the roll overs recorded fell to the near side – due to sheeting systems the vehicles are loaded from the opposite side). It is estimated that with 2/3 of the payload shifted onto one side, stability would be reduced by circa 2 degrees. IRTE guideline is for (CAT A) trailers to be constructed to cope with a 7% incline.

It is key that any safety system is maintained and set correctly, combined with adequate training. We recommend they are set to 4 degrees. Some are set to 6-degree alarm point, which is too high to prevent most roll overs.

It is also key that the system is periodically checked to ensure it is working correctly. Safety systems are not fool proof and if a vehicle is moved with the load already at height to uneven ground or shunted to assist a sticking load for example, a roll over could still occur.

Drivers interviewed see a safety benefit as it is very difficult for them to know if they have parked with the trailer on an incline or if the rear trailer wheels are on the stock pile, creating an incline.
The Fitting of Inclinometers to Articulated Tippers

80% of recorded roll overs were with less free flowing products, such as dust, sand and MOT materials which tend to stick in the trailer body, increasing instability and it is difficult for drivers to know how these products will discharge.

With the most common safety risk still being slips, trips and falls, a lot of work has been done in the industry to keep drivers in cabs. This does however reduce the ability of the driver to check loads for distribution and to walk around to inspect the delivery point.

It is appreciated that where businesses have more of a drop and pick up operation with their tractor and trailers there will be a variety of age combinations, an issue which has to be managed for other safety features, but which should be compatible with this policy given the proposed compliance period.
Contractor Safety

Vision Zero
MPA members and their Contractors will work closely together to reduce contractor injuries and the incidence of ill health, with the aim of realising Vision Zero.

Competency
MPA members will use only contractors who are competent, and should have systems in place (such as MP Connect) to verify contractor competence. Contractors will provide personnel and sub-contractors who are competent for the work to be undertaken. On matters of health & safety, MPA members will consider the needs of contractors with the same diligence as for employees.

Consistency of MPA Members’ Approach
MPA members will continue to work together to develop consistency in their approach to health & safety fundamentals for the benefit of all parties, e.g. ‘golden rules’; risk assessments; method statements; lock-out procedures; etc.

Risk Management
MPA members and Contractors will ensure that all risk assessments are specific for the work to be undertaken and have been prepared by competent persons including those involved in the task.

Supervision
MPA members and, where appropriate, Contractors will provide a point of contact on site and will ensure that the level of supervision is appropriate for the work being undertaken. MPA members and Contractors will provide a working environment that is fair and reasonable, and encourages an open approach towards improving health and safety.
Contractor Safety

Communication
MPA members will involve Contractors on site in Health & Safety Committees, safety briefings and toolbox talks, when appropriate. MPA Members and Contractors will encourage ‘Near Hit’ reporting as a positive leading indicator and will empower their employees to challenge conditions which undermine the aim of realising Vision Zero.

Occupational Health
Contractors will work with MPA members to address occupational health issues.

Safe Plant and Equipment
Contractors will ensure, by their own declaration, that their plant, tools and equipment are fit for purpose and meet accepted Industry standards.

MPQC Contractors Safety Passport
MPA strongly recommends that all Contractors obtain and retain valid MPQC/SPA Contractor Safety Passports and that MPA members request sight of these Passports upon the Contractor’s arrival, as part of a site specific induction. By exception, client exemptions may apply if the contractor is working under close, effective and proportionate supervision.

MPA Health & Safety Awards Scheme
MPA members will encourage Contractors to participate in the annual MPA Health & Safety Awards Scheme. Contractors will commit to take note of relevant articles in MPA’s ‘Sharing Good Practice’ guides and all other relevant guidance freely available at www.Safeguarry.com and www.Safeprecast.com
MPA Targets
MPA Targets

These targets are not intended to apply to members individually. MPA will consolidate data returned to it and compile results to enable monitoring in the same way as it does with existing health and safety data. The overall results of monitoring will be reported back to members and any action required discussed and agreed with them.

<table>
<thead>
<tr>
<th>Health &amp; Safety</th>
</tr>
</thead>
<tbody>
<tr>
<td>Employee and Contractor Health &amp; Safety</td>
</tr>
</tbody>
</table>

To treat the health, safety and well-being of employees, contractors and visitors as the number one priority in order to realise Vision Zero.

**Target:** To achieve a Lost Time Incident Frequency Rate below 1.5 by 2025 (equivalent to a 50% reduction from 2020).

**Target:** To achieve zero reportable incidents (fatalities and serious injuries) attributable to 'The Fatal 6' causes by 2025.

**Target:** To achieve zero incidence of uncontrolled personal exposures to RCS which are above the Workplace Exposure Limit.

**Progress:** LTIFR has shown an improving trend during 2022 and the rate has fallen below 3 for the first time, but further improvement is required to close the gap between the hard target and the current rate. The number of Reportable Incidents linked to ‘The Fatal 6’ remains broadly on track to meet the Hard Target.

A range of Leading Indicators were adopted in 2020 to help shift the focus from measuring ‘the absence of incidents’ to ‘the presence of health and safety’. The data for 2021 shows much greater coverage of member operations (81%) and employees (95%) compared to the baseline year (2020), with progress being made across all of the indicators:
- % member sites completing a company isolation audit (QNUAC or equivalent) within past 3 years (84%) and implemented an isolation action plan (98%);
- % member organisations requiring:
  1. drivers to hold a relevant skills/competency card (78%)
  2. contractors to hold a relevant skills/competency card (74%)

<tr>
<th>Targets</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Health &amp; Safety</strong></td>
</tr>
<tr>
<td><strong>Employee and Contractor Health &amp; Safety</strong></td>
</tr>
</tbody>
</table>
| **Leadership at all levels:**  
  - total number of individuals who have done Safer and Healthier By Leadership or equivalent during past 5 years (420);  
  - % operational members who have senior managers who have attended Safer and Healthier By Leadership within the past 5 years (18%) |
| **Recognition:**  
  - % member organisations who have submitted a MPA/British Precast H&S awards entry (16.8%) |
| **Forward Measurement:**  
  - number of safety alerts related to ‘F6’ reported on Safequarry (19);  
  - number of MPA members actively using [www.safequarry.com](http://www.safequarry.com) (1674 - full and associate) |
| **Healthy workplaces:**  
  - % member organisations providing an occupational health screening programme for employees (86%)  
  - % member organisations with a routine programme of personal exposure monitoring for RCS (90%) |
| **Engagement:**  
  - % member organisations participating in MPA H&S related events (41%) |
| **People** |
| **Local Communities** |
| To engage fully with local communities and strive to be good neighbours  
**Target:** To evaluate the need for a Community Engagement Plan for extractive sites and where appropriate at other sites and implement where necessary.  
**Progress:** A community engagement plan template is available as part of the [MPA Good Neighbour](http://www.safequarry.com) suite of resources |
# MPA Targets

| Resource Use  | To optimise the use of water and ensure prudent management.  
|---------------|---------------------------------------------------------------|
| Water         | **Target:** 100% of all sites to be measured for water consumption and discharges by 2025.  
|               | **Progress:** Monitoring of site water consumption and discharge is becoming more consistent across member sites. Further progress is anticipated in light of the new licensing regime.  
|               | To minimise waste and maximise re-use and recycling.  
|               | **Target:** Optimise waste used beneficially in accordance with the site Planning Permission for restoration purposes. To minimise extractive waste produced on site during the excavation phase in accordance with the mining waste directive BREF.  
|               | **Progress:** MPA updated the document *The Contribution of Recycled and Secondary Materials to Total Aggregates Supply in Great Britain in 2018.*  

| Climate Change & Energy  | To reduce emissions in accordance with the MPA carbon road maps and Government objectives.  
|--------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| Carbon & Atmospheric Emissions | **Target:** MPA to quantify the amount of CO₂ produced per tonne of product produced by each sector by 2020.  
|                           | **Progress:** Data on CO₂ produced per tonne of asphalt, hard rock, sand and gravel, cement, lime and precast is provided in the [MPA SD reports]. The UK Concrete and Cement Industry published its roadmap to Beyond Net Zero.  
|                           | MPA to showcase energy efficiency and decarbonisation action across the sector.  

| Climate Change & Energy  | To optimise the use of energy whilst maximising the use of non-fossil fuels.  
|--------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| Energy                   | **Target:** MPA will quantify the amount of energy consumed per tonne of product produced by each sector by 2020.  
|                           | **Progress:** Data on energy used per tonne of asphalt, hard rock, sand and gravel, cement, lime and precast is provided in the [MPA SD reports].  
|                           | MPA to showcase energy efficiency and decarbonisation action across the sector.  

### MPA Targets

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
<th>Target</th>
<th>Progress</th>
</tr>
</thead>
</table>
| **Climate Change & Energy Transport** | To reduce emissions and other impacts of the transportation and delivery of products. | **Target:** To understand and obtain a baseline for the amount of CO₂ produced per tonne of product transported by 2020.  
**Progress:** Whilst data on transport continues to be collected it is proving difficult to quantify the amount of CO₂ produced per tonne of product.  
MPA to showcase energy efficiency and decarbonisation action across the sector. |                                                                                                                                                                                                                     |
| **Natural Environment Biodiversity** | To protect and enhance biodiversity: deliver net gain wherever possible.  
Increase the area of priority Habitats through quarry restoration. | **Target:** 100% of extractive sites to have a Biodiversity Action Plan in place by 2025.  
**Progress:** Member sites with Biodiversity Action Plans in place continues to increase.  
A guide on implementing Biodiversity Action Plans has been provided to Members. The [MPA Biodiversity Strategy](#) has been updated and published. |                                                                                                                                                                                                                     |
| **Natural Environment Natural Capital** | To protect natural capital and enhance where possible. | **Target:** MPA to produce a report to assist minerals industry understanding of the Natural Capital balance of the industry by 2020.  
**Progress:** Initial work has been undertaken to better understand the concept and the implications for the mineral industry. A ‘watching brief’ is being kept to ensure that if policy progresses the industry is well placed to respond. |                                                                                                                                                                                                                     |
| **Natural Environment Environmental Protection** | To minimise and mitigate operational impacts | **Target:** 100% sites to have an Environmental Management System in place by 2025.  
**Progress:** Currently, over 95% of all sites report that they have an Environmental Management System in place. |                                                                                                                                                                                                                     |

</table>
| **Stay Safe**  
**Staff lead: Elizabeth Clements** |  
To prevent public death and injury from entering into operational quarries uninvited. To work collaboratively with other relevant stakeholders, particularly to raise public awareness of the hazards associated with quarry lakes or water filled voids in both operational and non-operational quarries. |  
- Support [UK Drowning Prevention Strategy](#) and national water safety strategies  
- Ensure risk assessments are up to date and that all incident data is provided promptly to MPA (via David Yelland).  
- Provide updates to MPA on sites members have identified as high risk site in relation to public safety (via David Yelland)  
- Focus on sites at risk, particularly with quarry lakes via strategic community relations and possible media activity.  
- Identify sites to MPA where there is an ongoing issue with trespass and are perceived high risk in relation to public safety to assist MPA with media strategy, mailing of resources to schools and school visits.  
- Various regions across the UK are establishing Inland Water Safety Forums – MPA have committed to providing representatives from the quarrying industry in areas where there is significant activity – provide representatives for circa 2 meetings a year.  
- Use [MPA public safety signage](#) at sites and promote internally.  
- Ensure that process is in place to check damage to warning signs and fencing and remain appropriate for site if operation or status has changed  
- Communicate key messages via internal communications and social media i.e. helping to keep their friends and family safe. Support [MPA Stay Safe Facebook](#) – promote to staff and other relevant parties. |

Strategies

MPA members will continue to take a positive approach to nature conservation and recovery, leaving behind more and better quality habitats than before mineral extraction (net gain) through sensitive site selection, management, restoration and aftercare.

MPA and its members will:

- Protect and enhance biodiversity through land and site management and restoration, including wherever possible, delivering a net gain in biodiversity.

- Extend our knowledge of the wildlife interest and potential on and adjacent to active sites, and how best to maximise benefits through management, restoration and after-use, through monitoring and sharing of experience.

- Share best practice between our members and partners through regular events, briefings, and through our Biodiversity & Nature Conservation working group.

- Develop our partnerships with conservation organisations, decision makers and individuals to ensure that opportunities to improve biodiversity associated with minerals operations are understood and realised.

- Celebrate our successes through our Quarries and Nature Awards, collating and publicising achievements.

- Understand our contribution to delivery of local, national and international biodiversity priorities, through measuring and reporting the gains that we are achieving and planning to deliver.

- Increase our influence through engagement with policy makers at all levels, including with global initiatives and in association with European Trade bodies.

- Promote awareness and participation using industry assets such as restored sites and education centres to encourage visitors and out-of-classroom learning, to encourage first-hand experiences of the natural environment and our role in its conservation.

For full details, please see the MPA Biodiversity Strategy.
## Strategies

| **MPA Water Strategy** | The strategy sets out three aims:  
- Minimising water consumption  
- Prioritising use of the most sustainable water sources  
- Protecting the water environment  

Achieving these will enable the mineral products industry to improve its understanding of the amount of water consumed and demonstrate where measures have been implemented to reduce consumption, use the most sustainable water sources and maintain water quality.  

MPA members are committed to the sustainable use of water over the entire product life cycle (cradle to grave) and designing products and solutions that will contribute to sustainable development.  

For full details, please see the [MPA Water Strategy](#). |
| **Concrete Industry Sustainable Construction Strategy** | The [Concrete Industry Sustainable Construction Strategy](#) represents a commitment from 10 sectors to an agreed performance indicator framework. Underpinning the strategy are the best practice approaches represented by ISO 14001 on Environmental Management and ISO 9001 for Quality and Performance.  

The strategy was launched in 2008 and is currently working to 2020 targets on a range of indicators including health and safety, responsible sourcing, waste minimisation, water, biodiversity, energy efficiency, resource efficiency, employment and skills, and local community.  

The vision, set in 2008, is to be recognised as a leader in sustainable construction, by taking a dynamic role in delivering a sustainable, low carbon built environment in a socially, environmentally and economically responsible manner.  

During 2023 this strategy will be updated and relaunched as the UK Concrete Sustainable Construction Strategy and will be aligned to the [UK Concrete and Cement Roadmap to Beyond Net Zero](#). |
There is an opportunity to deliver a net zero concrete and cement industry, reduce emissions from the built environment and support the delivery of the Government’s net zero target. We also have the potential to deliver beyond net zero by 2050 – removing more carbon from the atmosphere than we produce each year.

Our roadmap sets out a credible pathway to delivering net zero concrete and cement by 2050 together with our recommendations about the framework, policy and cross-industry collaboration that are required, and it draws on input from all major UK concrete and cement manufacturers.

Importantly, this model does not rely upon carbon offsetting or offshoring emissions but demonstrates a pathway to beyond net zero through the application of a range of deployable technologies. In our roadmap, we optimise the application of existing and emerging manufacturing technologies including energy efficiency, fuel switching, low-carbon cements and concretes, and carbon capture, use or storage (CCUS) to deliver net zero.
## Initiatives

**MPA Good Neighbour Scheme**

Staff lead: Elizabeth Clements

The MPA *Good Neighbour Scheme* outlines reasonable expectations that MPA members may have of themselves and each other in terms of activity which can have a direct impact on local communities, e.g. external appearance, noise, dust, mud, maintenance of entrances and perimeters etc. The former Saga Code of Practice 1991 has been used as a basis to construct a shorter, more contemporary, document.

The MPA Good Neighbour Scheme will assist with the delivery of the MPA Charter and in meeting our objective for Local Communities, thereby supporting the achievement of the MPA Vision. We firmly believe that by engaging more, the industry can build trust with local communities.

Conformity with planning and permitting conditions and schemes is the baseline for acceptable operational performance. Consideration should be given to forming a Community Engagement Plan in accordance with MPA guidance. Forming a local community liaison group is, however it is recognised that this is not always necessary or appropriate.

## Initiatives

| Core: Security | MPA holds regular meetings with the national police unit responsible for coordinating intelligence on supply chain protests, and has recently signed an MOU to formalise the way in which information is shared and exchanged. Any incidents or suspicious activity should continue to be reported to the local police force. However, individual member companies should also feed any reports of suspicious activity or emerging threats through MPA, via security@mineralproducts.org, to support the coordination of the mineral sector’s engagement with national police. Channelling information through MPA will also ensure that all member companies can be appropriately sighted on any new threats or risks that may be emerging in other parts of the country. |
| MPA Precast and MPA Masonry | • Raising the Bar  
  • Health & Safety Charter  
  • Sustainability Charter |
| MPA Restoration Guarantee Fund (RGF) | The MPA Restoration Guarantee Fund is an arms-length limited company which provides a £1m overall guarantee to planning authorities against a restoration default up to a single claim limit of £500k. It applies to active extraction sites operated by Fund members across England, Wales and Scotland producing rock, sand & gravel, industrial sands and dimension stone. A planning authority can submit a claim when the operator of a quarry is unable to meet restoration obligations that arise through a planning condition as a result of financial failure. All new Producer Members of the MPA will have to be considered by the RGF Board for membership and will only become RGF members if their application is approved by the RGF Board. The RGF Board will consider the information supplied as part of this application, and may request updates or further information. At all times before admitting an MPA member to membership of the RGF the Board members should satisfy themselves that the applicant is making adequate provision to meet their restoration obligations and on the basis of evidence provided to them, is unlikely in the foreseeable future to call upon the indemnity provided by the Fund. Please note that the Board have full discretion on the acceptance or rejection of applicants to the Fund. |

*(a) Includes Northern Ireland. *(b) Converted using 2.38 tonnes per cubic metre of ready-mixed concrete. *(c) Latest data available is for 2014.*
Mineral Products from Resources to Uses

6 storey city centre office building
16,480 tonnes of concrete

Typical home
12 tonnes of mortar
200 tonnes of aggregates

School
15,000 tonnes of concrete

Community hospital
53,000 tonnes of concrete

Crossrail
250,000 concrete segments

HS2
25mt of aggregates/minerals

Road – A14 Cambridge to Huntingdon Improvement Scheme
730,000 tonnes of asphalt
Vision Zero Branding

Vision Zero and the strapline, Safe & Well Every Day, is the message and brand behind MPA’s reinvigorated health & safety plan until 2025.

Members are encouraged demonstrate their endorsement of Vision Zero by integrating it into their own company Health & Safety strategy and by visibly adopting the brand. For example, on PPE, H & S documents, posters, stickers and campaign merchandise. The following artwork is available:

**Exclusion zone**

The Vision Zero logo should always be surrounded by a minimum amount of clear space where no other content should be placed. This is calculated using the ‘O’ from the logo itself at 100%, and is the mandatory minimum clearance to all 4 sides.

**Minimum sizing**

The minimum size to place the Vision Zero logo is 31mm wide – this is to ensure the legibility of the logo. There is no maximum size.
Vision Zero Branding

Incorrect usage

The logo mustn’t be redrawn or altered in terms of its appearance, components, colours, proportions, or any other property. For example:

Do not change the colour of the logo

Do not squash or stretch the logo

Do not rotate or slant the logo

Do not use logo on cluttered image

Logo use examples

Please contact Elizabeth Clements (elizabeth.clements@mineralproducts.org) for further information or advice.

The logo art work is now available for MPA members to utilise within their own companies on their own. Members are encouraged to adopt the brand.
Stay Safe Signage

A series of MPA developed warning signs covering the hazards found in quarries are available from these official suppliers:

GSB Signs – www.gsbhealthandsafetysigns.co.uk
Rainbow Signs – www.uksafetystore.com and www.rainbowsafety.co.uk
Signify Signs – www.signifysigns.co.uk

If you would like to use your own supplier, please ask them to contact Elizabeth Clements, to facilitate this.
MPA Good Neighbour Resources

The Good Neighbour initiative provides members with materials for use when engaging with their local communities, and, consists of the following elements:

• A proposed MPA Community Engagement Plan template for use as required.

• A suite of banners and signs that members are encouraged to install in and around sites to demonstrate their support for the initiative.

• An A4/A3 poster for internal use, outlining your site’s commitment to the initiative which should be placed within internal offices and on company notice boards.

• A proposed ‘How Are We Doing?’ and Community Response checklist of the features of the initiative to assess how the local community perceives the site has performed in a particular year, ideally completed at the year end.
Health & Safety Website and App

Safequarry is the health and safety hub for the mineral products and precast industries. It provides one location where users can access key health and safety resources such as:

- Guidance
- Incident Alerts
- Good Practice Case Studies
- Toolbox Talks
- Hot Topics
- Over 400 Safety Videos

Users registered on Safequarry.com will receive e-mail alerts when new content has been added. **Both the website and the App are free.**

To download the App search ‘Safequarry’ in your phone’s app store.
